- Cinematography
- Music

ABOUT ME

I am a Data Analyst with a background in International Business, Supply Chain, Fashion. Curious about tech, automation, and innovations, inspired by the magnitude of the impact that Statistical Learning could bring to businesses and society. Some of my strengths are the ability to adapt rapidly to any tech stack and business requirements, logical thinking, ability to communicate insights to both tech and business stakeholders.

RECENT PROJECTS

Supply Chain Analysis & Demand Forecasting
For this project I used python to clean & prepare data, explore some insights, build new features of data set and, finally, a built a ML model using time series data to predict future demand with accuracy of around 5%.

Credit Card Campaign Analysis
Using SQL, Python and Tableau I got key insights on how to get the most value out of credit card marketing campaign and tried both Linear and non-linear ML models to predict whether customer would accept the offer with overall accuracy of 74%.

WORK EXPERIENCE

International Operations Agent / Account Manager

AIT Worldwide Logistics - Amsterdam   2022 - 2023

Successfully led daily Logistics Operations for our client, an international media solutions company. Some of the main tasks:
- European stock coordination;
- Performance management using BI Tools;
- Domestic and international shipment & distribution coordination;
- A key contact person for the stakeholders, and suppliers.
